

how we made our bug hotel

We started with a pallet.
Next, we cut out planks of wood using a jigsaw (a type of saw) to get the wood we needed because the nails wouldn't come out.

We arranged the wood to how we wanted our bug hotel to look and then nailed everything into place.

After that we packed the wooden structure with: dry grass, hollow stems, straw, bark, tiles, old bits of pot, pine cones, sticks and dry leaves.

Finally, we placed our bug hotel on some rocks in the corner of our field facing east.
